## Drill Down Storytelling Data

### Background information:

- Events like COVID and 9/11 impacted the aviation industry.
- Flights out of Seattle were impacted by these events.
- Our data tracks the number of flights per month over the year before and year following one of these events.
- 2000/2002 is corresponding to 9/11.
- 2018/2022 is corresponding to COVID.
- My graphs show the top 10 destinations flying out from Seattle during each time (9/11 and COVID) and tracks how the number of flights changed following these events.

My data shows the 10 most popular destinations for flights from Seattle and how the number of flights to these destinations per month changes following events that impact the aviation industry. My data shows how though these traumatic events would lead people to be weary of travel, the industry continues to grow in the number of flights per month even after these events.
